| Deskripsi singkat Aplikasi                                   | <p>TelEvent adalah sistem manajemen event kampus berbasis arsitektur microservices yang menggunakan GraphQL API sebagai antarmuka komunikasi antar layanan. Aplikasi ini dirancang untuk membantu panitia dan pengelola kegiatan kampus dalam mengelola event, tiket, staf, dan pembicara secara terintegrasi.</p> <p>Setiap domain entitas dipisahkan menjadi layanan independen (microservice) yang masing-masing memiliki endpoint GraphQL, database, dan Docker container sendiri. Frontend dibangun menggunakan Vue 3 via CDN yang mengonsumsi keempat endpoint tersebut secara langsung.</p> |

| Arsitektur / Workflow Aplikasi                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. Arsitektur Sistem</p> <p>TelEvent menggunakan arsitektur Microservices di mana setiap domain entitas dipisah menjadi layanan independen yang masing-masing memiliki GraphQL endpoint, database, dan container Docker tersendiri.</p> <p>Sistem terdiri dari empat lapisan utama:</p> <ol style="list-style-type: none"> <li>Client Layer<br/>Frontend dibangun menggunakan Vue 3 via CDN yang langsung dijalankan di browser melalui file client/index.html. Komunikasi ke backend dilakukan melalui Fetch API yang mengirimkan operasi GraphQL dalam format HTTP POST ke masing-masing endpoint service.</li> <li>Service Layer<br/>Terdapat empat microservice independen yang masing-masing menangani satu domain entitas, dibangun di atas Apollo Server 4 dan Express 4 dengan Node.js 20 Alpine sebagai runtime.</li> </ol> |

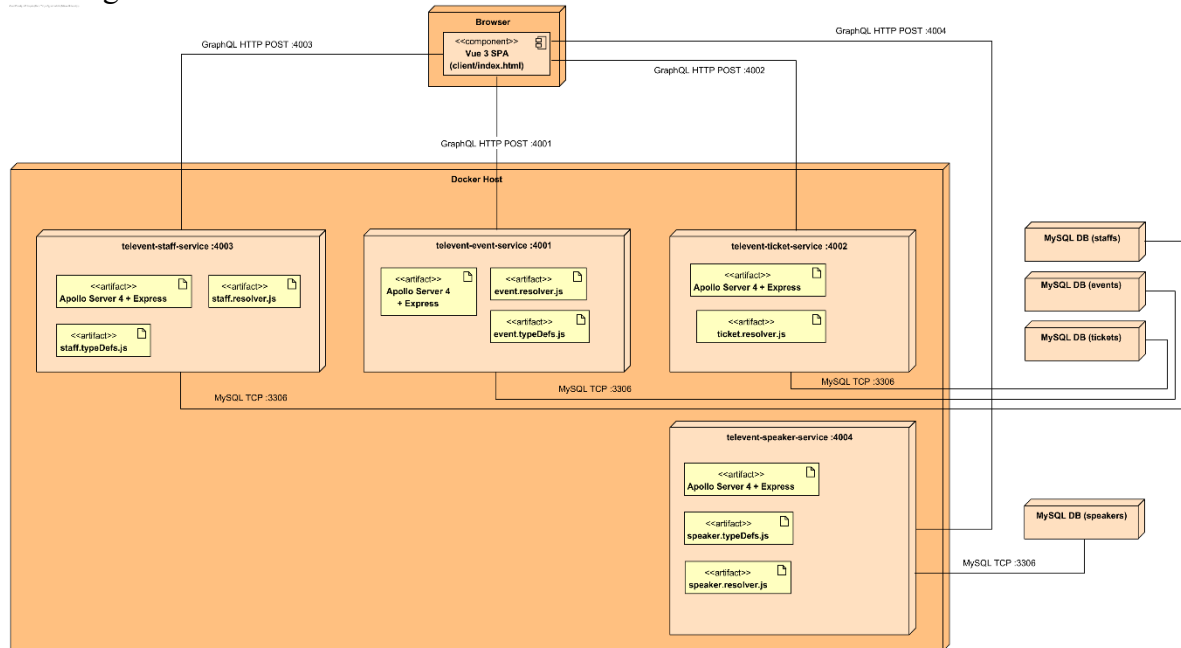

c. Container Layer

Setiap service dibungkus dalam Docker container tersendiri dan dikelola bersama melalui docker-compose.yml. Konfigurasi database disimpan dalam file .env yang di-inject ke container saat runtime.

d. Database Layer

Setiap service terhubung ke database MySQL yang terpisah. Relasi antar entitas dijaga secara logis melalui event\_id, staff\_id, dan speaker\_id tanpa foreign key constraint lintas service.

## 2. Diagram Arsitektur

## 3. Stack Teknologi per Layer

| Layer            | Teknologi                             |
|------------------|---------------------------------------|
| Frontend         | Vue 3 (CDN), Bootstrap 5.3, Fetch API |
| GraphQL Server   | Apollo Server 4, Express 4            |
| Runtime          | Node.js 20 Alpine                     |
| Database         | MySQL 2                               |
| Containerization | Docker, Docker Compose                |

## 4. Alur Request (Workflow)

User aksi di browser  
↓  
Vue 3 bentuk query/mutation  
↓  
Fetch API → HTTP POST → /graphql  
↓

```

Apollo Server parse operasi
↓
Resolver dipanggil
↓
Query SQL ke MySQL
↓
MySQL return rows
↓
Apollo susun JSON response
↓
Vue 3 update tampilan

```

## Schema type

### 1. Schema Type:

#### 1.1 Event Service (localhost:4001/graphql)

| Komponen | Nama                                   | Keterangan                        |
|----------|----------------------------------------|-----------------------------------|
| Type     | Event                                  | Representasi data event           |
| Input    | EventInput                             | Payload untuk create/update event |
| Query    | events(search, status, sort_by, order) | Ambil semua event dengan filter   |
| Query    | event(id)                              | Ambil satu event by ID            |
| Query    | eventsByStatus(status_event)           | Filter event by status            |
| Mutation | createEvent(input)                     | Tambah event baru                 |
| Mutation | updateEvent(id, input)                 | Update event                      |
| Mutation | deleteEvent(id)                        | Hapus event                       |

#### 1.2 Ticket Service (localhost:4002/graphql)

| Komponen | Nama                                     | Keterangan                        |
|----------|------------------------------------------|-----------------------------------|
| Type     | TicketCategory                           | Representasi kategori tiket       |
| Input    | TicketCategoryInput                      | Payload untuk create/update tiket |
| Query    | ticketCategories(search, sort_by, order) | Ambil semua kategori tiket        |
| Query    | ticketCategory(id)                       | Ambil satu tiket by ID            |
| Query    | ticketCategoriesByEvent(event_id)        | Ambil tiket berdasarkan event     |
| Mutation | createTicketCategory(input)              | Tambah kategori tiket baru        |
| Mutation | updateTicketCategory(id, input)          | Update kategori tiket             |
| Mutation | deleteTicketCategory(id)                 | Hapus kategori tiket              |

#### 1.3 Staff Service (localhost:4003/graphql)

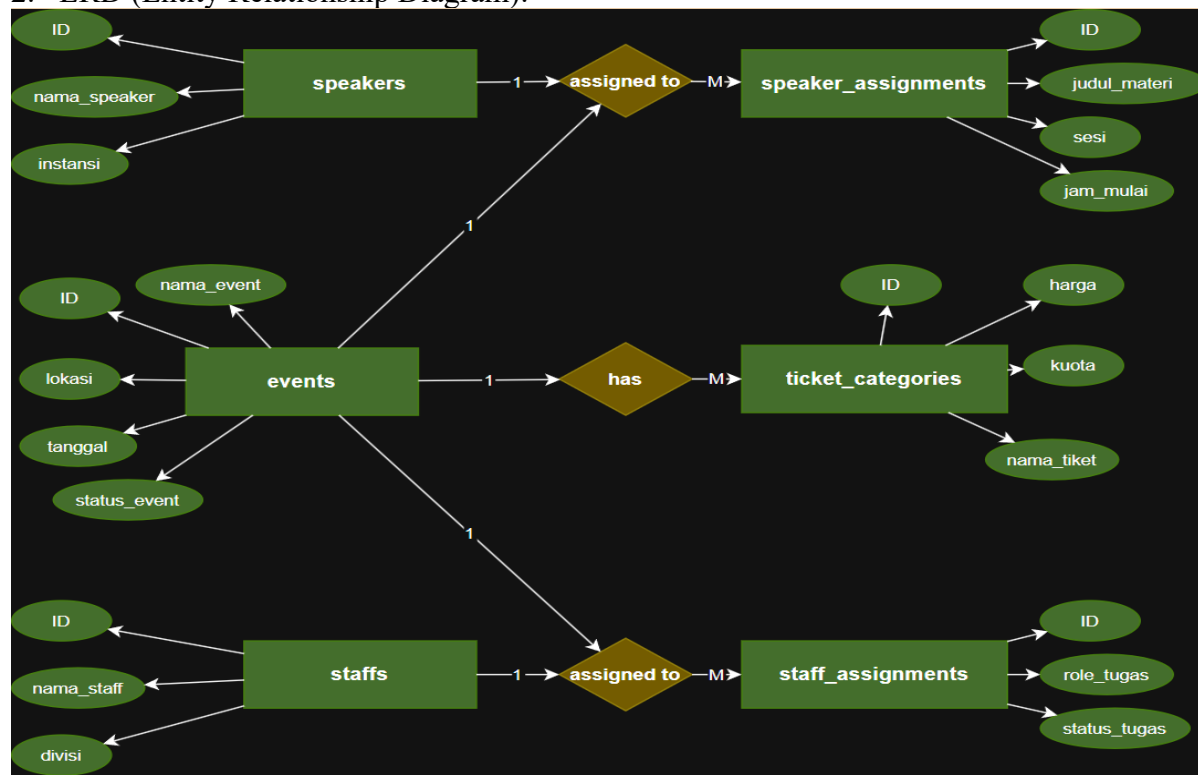

| Komponen | Nama                              | Keterangan                            |
|----------|-----------------------------------|---------------------------------------|
| Type     | Staff                             | Representasi data staf                |
| Type     | StaffAssignment                   | Representasi penugasan staf ke event  |
| Input    | StaffInput                        | Payload untuk create/update staf      |
| Input    | StaffAssignmentInput              | Payload untuk create/update penugasan |
| Query    | staffs(search, sort_by, order)    | Ambil semua staf                      |
| Query    | staff(id)                         | Ambil satu staf by ID                 |
| Query    | staffAssignments                  | Ambil semua penugasan staf            |
| Query    | staffAssignmentsByEvent(event_id) | Penugasan staf berdasarkan event      |
| Query    | staffAssignmentsByStaff(staff_id) | Penugasan berdasarkan staf            |
| Mutation | createStaff(input)                | Tambah staf baru                      |
| Mutation | updateStaff(id, input)            | Update data staf                      |
| Mutation | deleteStaff(id)                   | Hapus staf                            |
| Mutation | createStaffAssignment(input)      | Tambah penugasan baru                 |

|          |                                  |                  |
|----------|----------------------------------|------------------|
| Mutation | updateStaffAssignment(id, input) | Update penugasan |
| Mutation | deleteStaffAssignment(id)        | Hapus penugasan  |

#### 1.4 Speaker Service (localhost:4004/graphql)

| Komponen | Nama                                    | Keterangan                          |
|----------|-----------------------------------------|-------------------------------------|
| Type     | Speaker                                 | Representasi data pembicara         |
| Type     | SpeakerAssignment                       | Representasi jadwal sesi pembicara  |
| Input    | SpeakerInput                            | Payload untuk create/update speaker |
| Input    | SpeakerAssignmentInput                  | Payload untuk create/update jadwal  |
| Query    | speakers(search, sort_by, order)        | Ambil semua speaker                 |
| Query    | speaker(id)                             | Ambil satu speaker by ID            |
| Query    | speakerAssignments                      | Ambil semua jadwal sesi             |
| Query    | speakerAssignmentsByEvent(event_id)     | Jadwal sesi berdasarkan event       |
| Query    | speakerAssignmentsBySpeaker(speaker_id) | Jadwal berdasarkan speaker          |
| Mutation | createSpeaker(input)                    | Tambah speaker baru                 |
| Mutation | updateSpeaker(id, input)                | Update data speaker                 |
| Mutation | deleteSpeaker(id)                       | Hapus speaker                       |
| Mutation | createSpeakerAssignment(input)          | Tambah jadwal sesi baru             |
| Mutation | updateSpeakerAssignment(id, input)      | Update jadwal sesi                  |
| Mutation | deleteSpeakerAssignment(id)             | Hapus jadwal sesi                   |

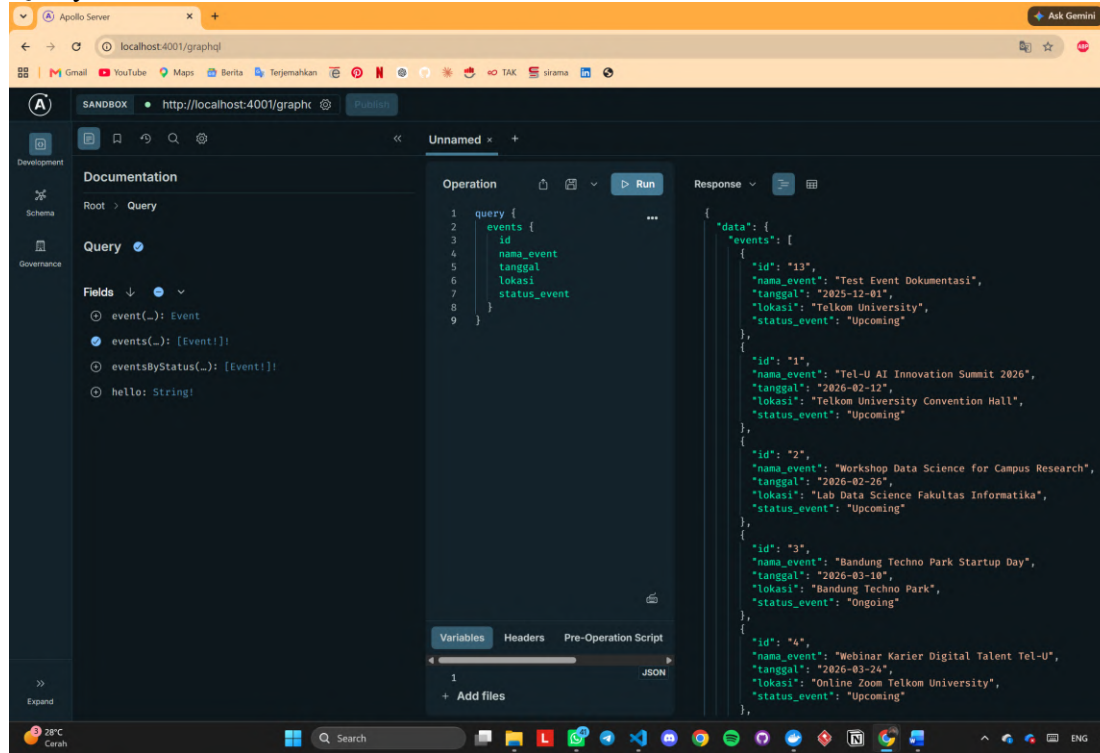

## 2. ERD (Entity Relationship Diagram):

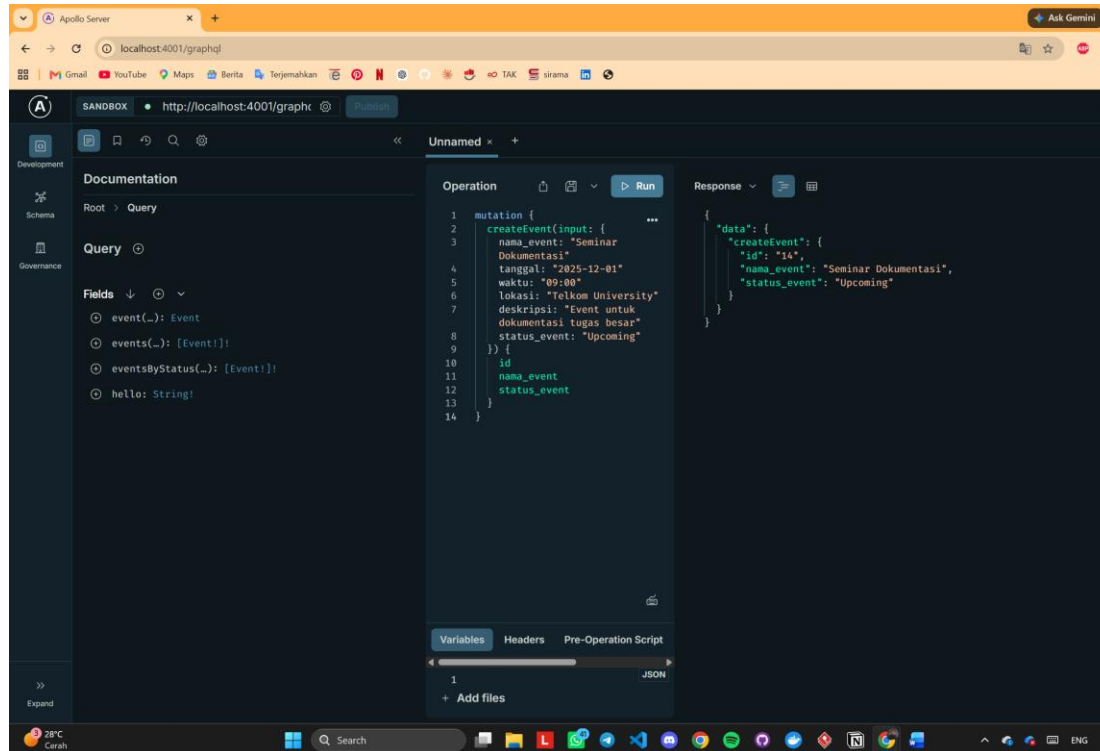

## Screenshot query/mutation

### 1. Event Service

#### 1.1 Query - semua event

#### 1.2 Mutation - create event

### 2. Ticket Service

## 2.1 Query - semua tiket

The screenshot shows the Apollo Server Sandbox interface. The URL is `http://localhost:4002/graph`. The query editor contains the following query:

```
1 query {
2   ticketCategories {
3     id
4     event_id
5     nama_tiket
6     harga
7     kuota
8     tiket_terjual
9   }
10 }
```

The response shows a list of ticket categories:

```
{
  "data": {
    "ticketCategories": [
      {
        "id": "11",
        "event_id": "9",
        "nama_tiket": "Bootcamp Full Day Pass",
        "harga": 85000,
        "kuota": 70,
        "tiket_terjual": 25
      },
      {
        "id": "7",
        "event_id": "5",
        "nama_tiket": "Competition Team Registration",
        "harga": 100000,
        "kuota": 30,
        "tiket_terjual": 12
      },

}
```

## 2.2 Mutation - create tiket

The screenshot shows the Apollo Server Sandbox interface. The URL is `http://localhost:4002/graph`. The mutation editor contains the following mutation:

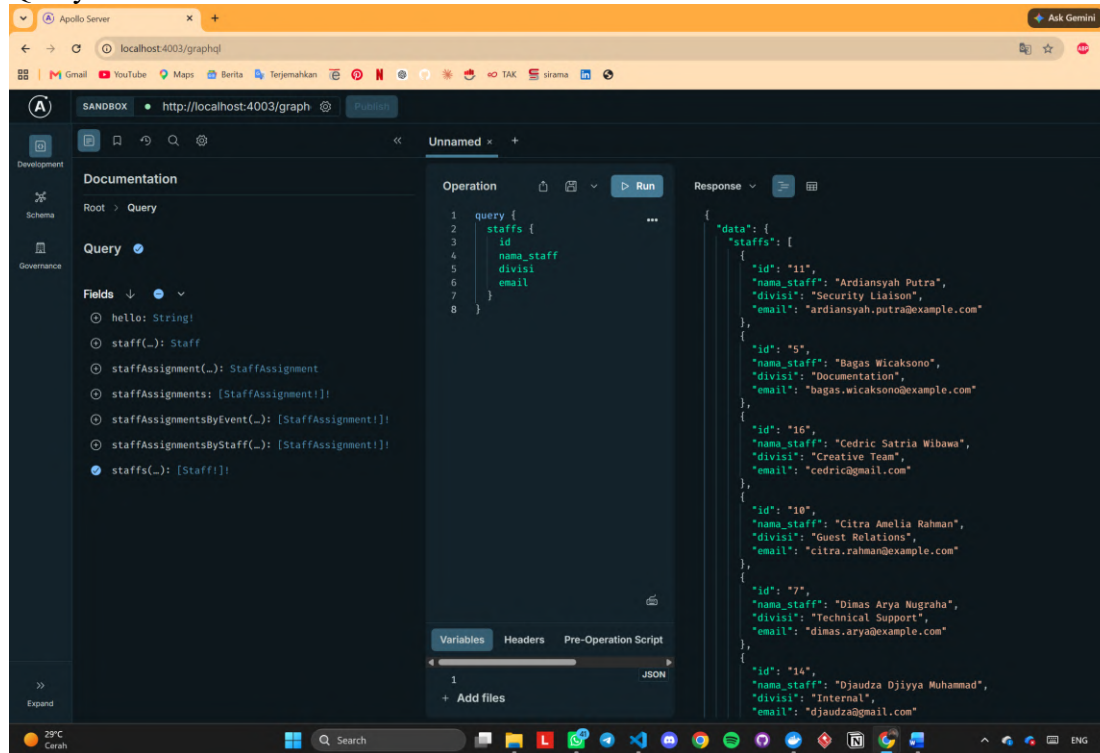

```
1 mutation {
2   createTicketCategory(input: {
3     event_id: "1"
4     nama_tiket: "Tiket Regular"
5     harga: 50000
6     kuota: 200
7     tiket_terjual: 0
8     deskripsi: "Tiket masuk reguler"
9   }) {
10     id
11     nama_tiket
12     harga
13   }
14 }
```

The response shows the created ticket category:

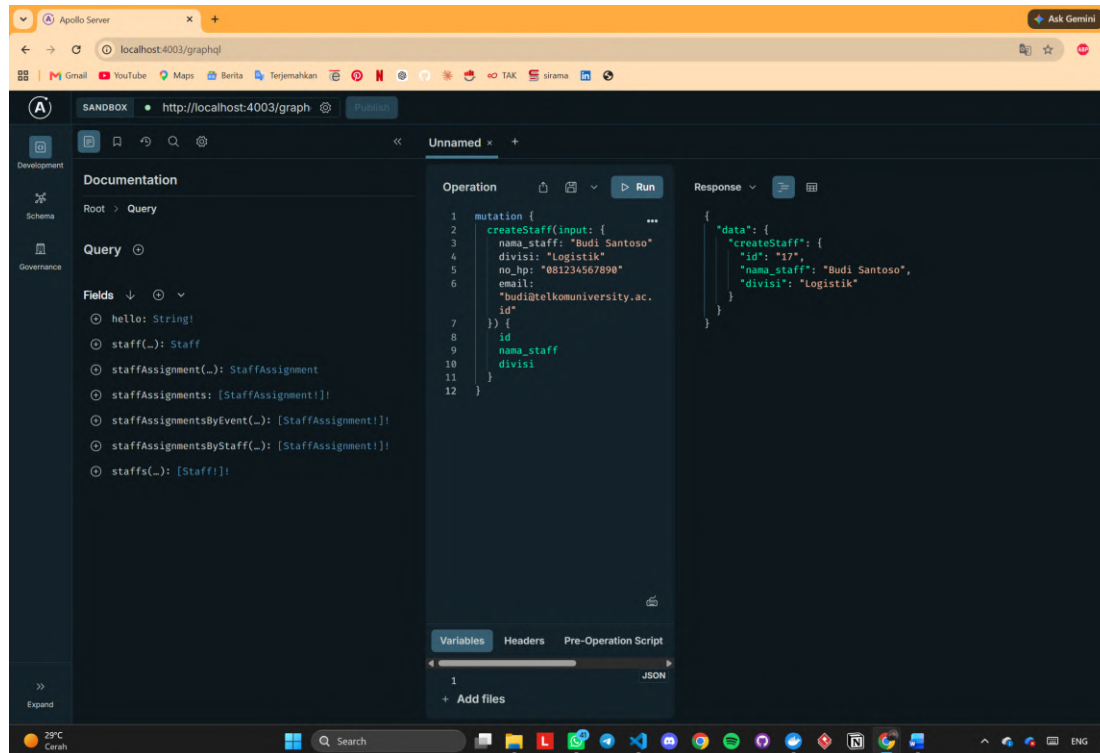

```
{
  "data": {
    "createTicketCategory": {
      "id": "14",
      "nama_tiket": "Tiket Regular",
      "harga": 50000
    }
  }
}
```

## 3. Staff Service

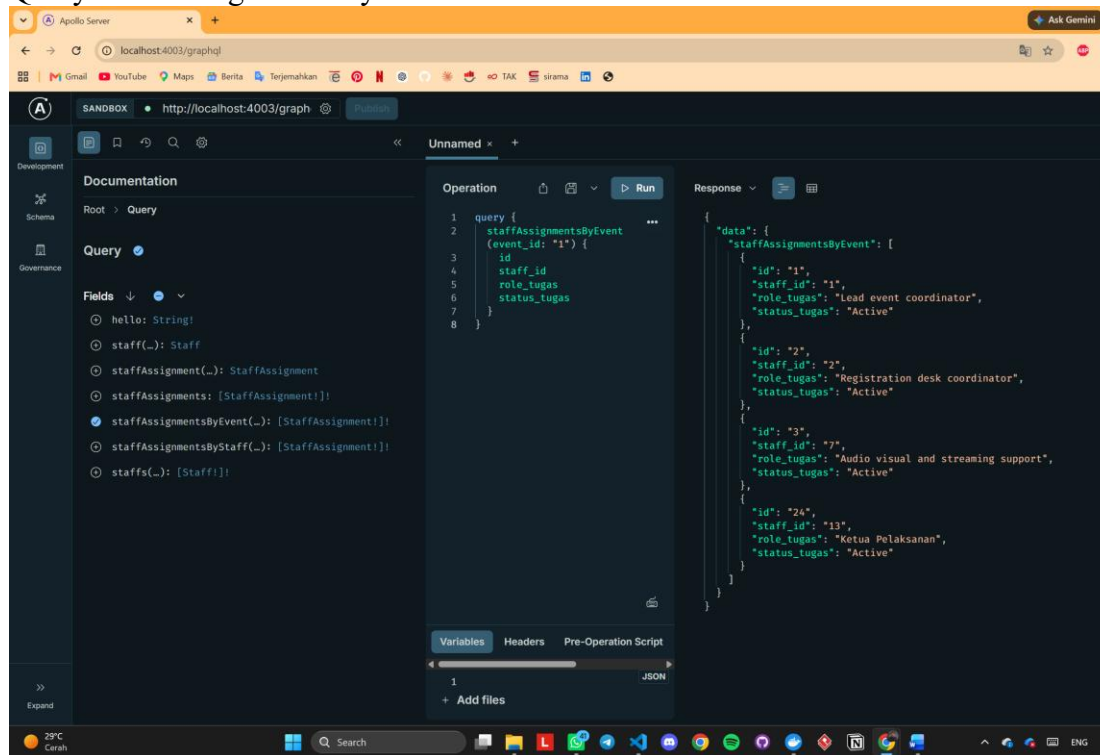

### 3.1 Query - semua staff

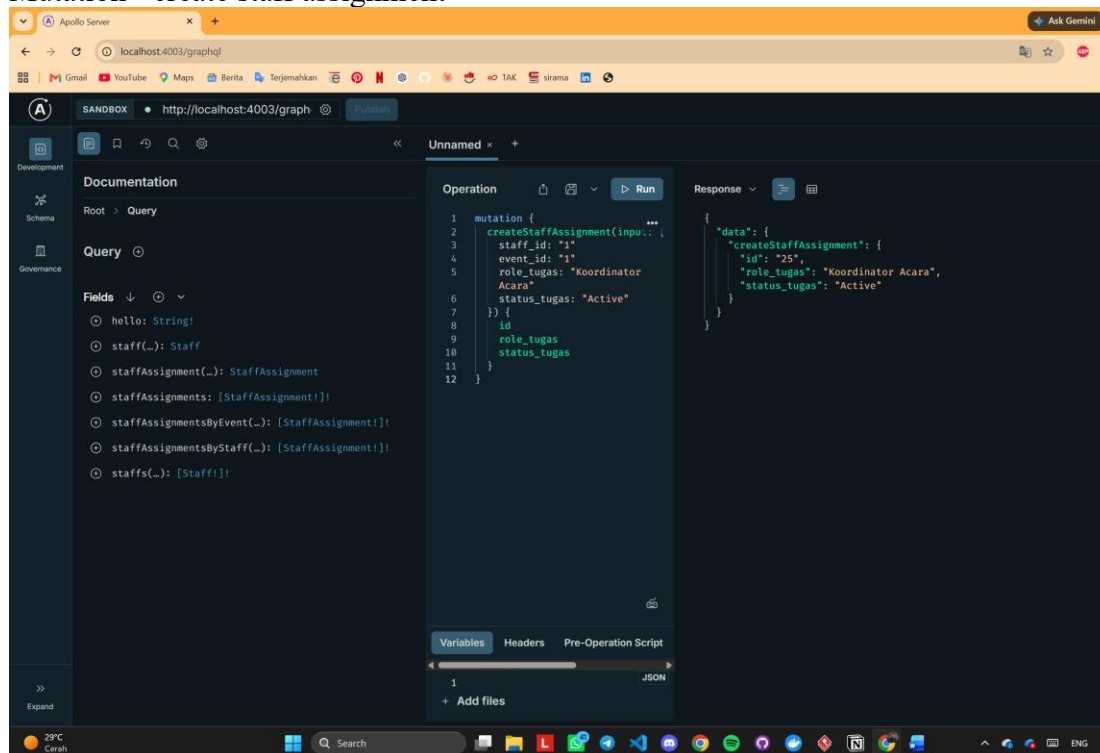

### 3.2 Mutation - create staff

### 3.3 Query - staff assignments by event

### 3.4 Mutation - create staff assignment

## 4. Speaker Service

## 4.1 Query - semua speaker

The screenshot shows the Apollo Sandbox interface with a query to fetch all speakers. The query is as follows:

```
1 query {
2   speakers {
3     id
4     nama_speaker
5     instansi
6     bidang_keahlian
7   }
8 }
```

The response is a JSON object containing an array of speaker data:

```
{
  "data": {
    "speakers": [
      {
        "id": "7",
        "nama_speaker": "Bima Satria",
        "instansi": "SecureNet Indonesia",
        "bidang_keahlian": "Cybersecurity"
      },
      {
        "id": "1",
        "nama_speaker": "Dr. Alif Ramadhan",
        "instansi": "Telkom University",
        "bidang_keahlian": "Artificial Intelligence"
      },
      {
        "id": "8",
        "nama_speaker": "Dr. Keisha Amanda",
        "instansi": "Telkom University Library",
        "bidang_keahlian": "Academic Writing"
      },
      {
        "id": "9",
        "nama_speaker": "Farhan Wiratama",
        "instansi": "Bandung Digital Business Forum",
        "bidang_keahlian": "Digital Business"
      },
      {
        "id": "5",
        "nama_speaker": "Iqbal Naufal",
        "instansi": "UX Bandung Collective",
        "bidang_keahlian": "UI/UX Design"
      },
      {
        "id": "10",
        "nama_speaker": "Laras Ayuningtyas",
        "instansi": "Smart City Lab Bandung",
        "bidang_keahlian": "Smart Campus Solution"
      }
    ]
  }
}
```

## 4.2 Mutation - create speaker

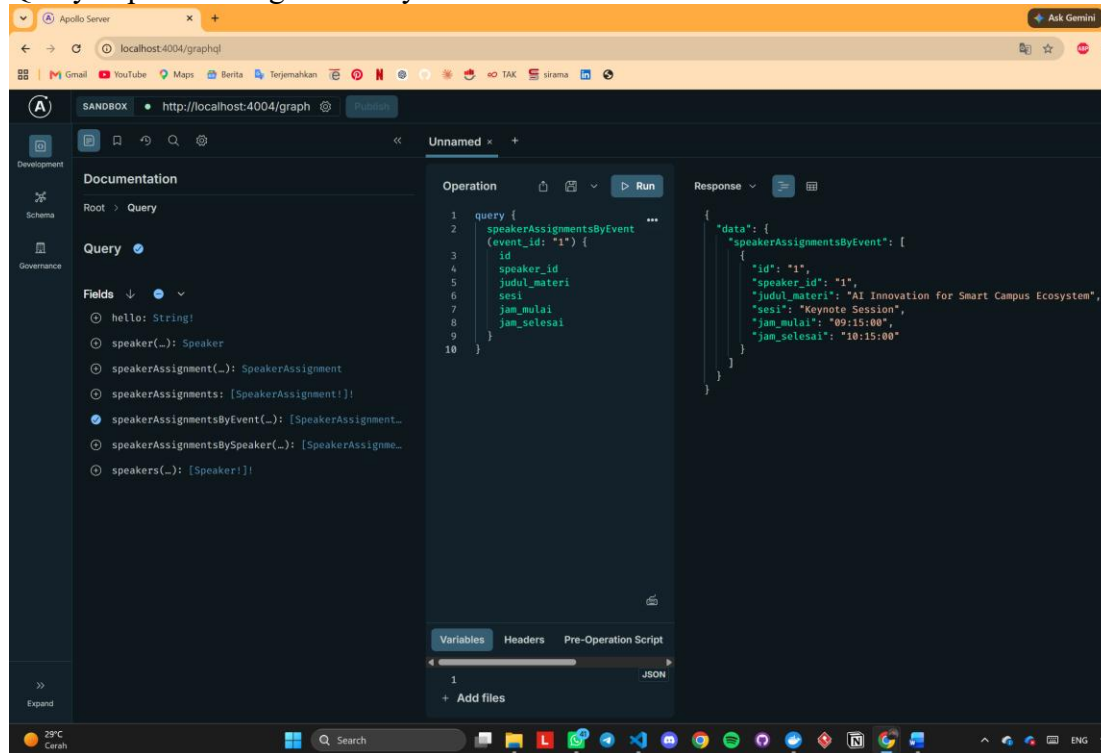

The screenshot shows the Apollo Sandbox interface with a mutation to create a new speaker. The mutation is as follows:

```
1 mutation {
2   createSpeaker(input: {
3     nama_speaker: "Dr. Andi
4     Wijaya"
5     instansi: "Institut
6     Teknologi Bandung"
7     bidang_keahlian:
8     "Artificial Intelligence"
9     email: "andi@itb.ac.id"
10    no_hp: "081298765432"
11  }) {
12    id
13    nama_speaker
14    instansi
15  }
16 }
```

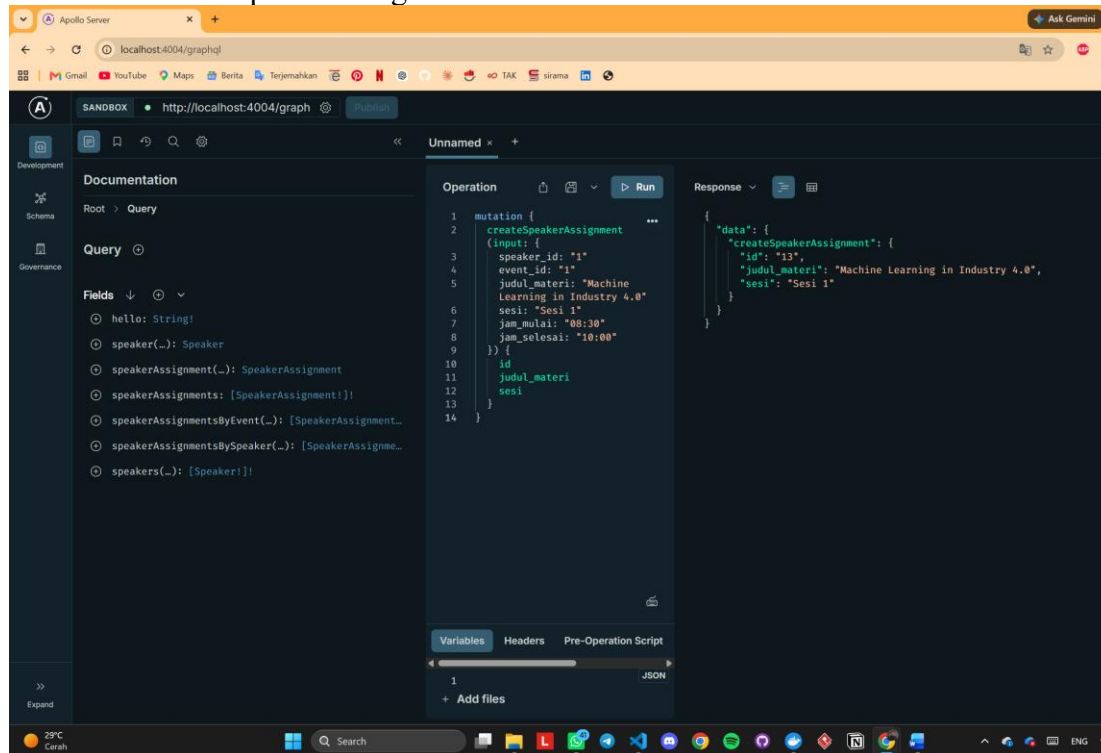

The response is a JSON object containing the created speaker data:

```
{
  "data": {
    "createSpeaker": {
      "id": "11",
      "nama_speaker": "Dr. Andi Wijaya",
      "instansi": "Institut Teknologi Bandung"
    }
  }
}
```

#### 4.3 Query - speaker assignments by event

#### 4.4 Mutation - create speaker assignment

Screenshot Client/UI

## Dashboard:

The dashboard provides a high-level overview of event management. It features a sidebar with navigation links: Dashboard, Events, Ticket Categories, Staff Management, Speaker Management, and Assignments. The main content area is titled 'Dashboard' and includes a 'Refresh' button and a user profile for 'Event Admin Organizer'. Key statistics are displayed in four cards: Total Events (11), Ticket Categories (12), Total Staffs (16), and Total Speakers (10). Below these, the 'LIVE PLANNING' section shows 'Upcoming Events' with a 'View all' link. These events include 'Tel-U AI Innovation Summit 2026', 'Workshop Data Science for Campus Research', 'Webinar Karier Digital Talent Tel-U', 'Lomba UI/UX Mahasiswa Telkom University', 'Festival UKM Tel-U 2026', and 'Academic Writing Clinic 2026'. Each event card shows its date, time, location, description, progress bar, and ticket sales. A 'RECENT WORK' section on the right lists 'Assignments' with a total of 36 and 17 active staff tasks, including roles like 'Lead event coordinator' and 'Registration desk coordinator'.

| Event Name                                | Date & Time           | Location                              | Description                                                                                           | Progress | Ticket Sales              |
|-------------------------------------------|-----------------------|---------------------------------------|-------------------------------------------------------------------------------------------------------|----------|---------------------------|
| Tel-U AI Innovation Summit 2026           | 2026-02-12 - 09:00:00 | Telkom University Convention Hall     | Seminar inovasi kecerdasan buatan untuk mahasiswa, dosen, dan komunitas teknologi Telkom University.  | 28%      | 65 / 230 sold, Rp 25.000  |
| Workshop Data Science for Campus Research | 2026-02-26 - 13:00:00 | Lab Data Science Fakultas Informatika | Workshop pengolahan data penelitian kampus menggunakan Python, notebook, dan visualisasi data.        | 45%      | 18 / 40 sold, Rp 50.000   |
| Webinar Karier Digital Talent Tel-U       | 2026-03-24 - 19:00:00 | Online Zoom Telkom University         | Webinar persiapan karier digital, CV, interview, dan personal branding untuk mahasiswa tingkat akhir. | 60%      | 180 / 300 sold, Rp 35.000 |
| Lomba UI/UX Mahasiswa Telkom University   | 2026-04-08 - 10:00:00 | Gedung Tokong Nanas                   | Kompetisi desain UI/UX bertema solusi digital untuk layanan kampus.                                   | 40%      | 12 / 30 sold, Rp 100.000  |
| Festival UKM Tel-U 2026                   | 2026-04-22 - 15:00:00 | Lapangan Gedung Serba Guna Tel-U      | Pameran dan showcase kegiatan UKM mahasiswa Telkom University.                                        | 42%      | 210 / 500 sold, Rp 80.000 |
| Academic Writing Clinic 2026              | 2026-05-20 - 13:30:00 | Perpustakaan Telkom University        | Klinik penulisan akademik untuk membantu mahasiswa menyusun artikel dan tugas akhir.                  | 44%      | 22 / 50 sold, Rp 30.000   |

## Events:

The 'Events' page is dedicated to managing individual events. It includes a search bar, filters for 'All statuses', and sorting options by date and ascending order. A grid of event cards is displayed, each with 'Edit' and 'Delete' buttons. The events shown include 'Tel-U AI Innovation Summit 2026', 'Workshop Data Science for Campus Research', 'Bandung Techno Park Startup Day', 'Webinar Karier Digital Talent Tel-U', 'Lomba UI/UX Mahasiswa Telkom University', and 'Festival UKM Tel-U 2026'. Each card provides detailed information about the event, including its date, time, location, description, progress bar, and ticket sales.

| Event Name                                | Date & Time           | Location                              | Description                                                                                           | Progress | Ticket Sales              |
|-------------------------------------------|-----------------------|---------------------------------------|-------------------------------------------------------------------------------------------------------|----------|---------------------------|
| Tel-U AI Innovation Summit 2026           | 2026-02-12 - 09:00:00 | Telkom University Convention Hall     | Seminar inovasi kecerdasan buatan untuk mahasiswa, dosen, dan komunitas teknologi Telkom University.  | 28%      | 65 / 230 sold, Rp 25.000  |
| Workshop Data Science for Campus Research | 2026-02-26 - 13:00:00 | Lab Data Science Fakultas Informatika | Workshop pengolahan data penelitian kampus menggunakan Python, notebook, dan visualisasi data.        | 45%      | 18 / 40 sold, Rp 50.000   |
| Bandung Techno Park Startup Day           | 2026-03-10 - 08:30:00 | Bandung Techno Park                   | Kegiatan pitching dan sharing startup digital untuk mahasiswa Telkom University.                      | 58%      | 105 / 180 sold, Rp 40.000 |
| Webinar Karier Digital Talent Tel-U       | 2026-03-24 - 19:00:00 | Online Zoom Telkom University         | Webinar persiapan karier digital, CV, interview, dan personal branding untuk mahasiswa tingkat akhir. | 60%      | 180 / 300 sold, Rp 35.000 |
